

# **LOD2 From Vertical & Oblique Imagery**

Andy Mc Gill

#### **Oblique Cameras & Dense Image Matching Southampton 19th & 29th Oct 2015**

### **Overview**

- Introduction to OSi
- OSi Mandate
- Purpose
- Area Selected
- Imagery
- Workflow
- Results
- Next Steps

### Introduction

- Size: 70,000km2 / Population: 4.6m
- Established in 1824 (191 years)
- Established as a State Body in 2002 under the OSi Act 2001
- 216 staff (public servants)
- Head Office in Phoenix Park, Dublin with 6 Regional Offices
- Merging of OSi, Valuation Office & Property Registration Authority

### **OSi Mandate**

To provide a national mapping service in the State... creating and maintaining the definitive national mapping and related geographic records

To encourage and promote the benefits of the use of the national mapping and related databases and the developments of products, services and markets to meet national and user needs

- Maintain & develop the Underlying physical infrastructure
- Create & Maintain for the entire State mapping and related geographic databases
- Encourage and promote its benefits
- Advice to Government on Geographic Information & SDI
- Boundary surveys
- Protecting copyright

### Purpose

### To Investigate the following;

- A <u>practical</u> and <u>cost effective</u> methodology to remap areas with legacy issues
- A method of updating and managing a 3D Landscape Model of the <u>entire state</u> in Prime2.
- Moving our data into the 21<sup>st</sup> century
- Achieve this using <u>automated</u> systems with a <u>minimum manual intervention for the</u> <u>conditions we operate in</u>

#### **Oblique Cameras & Dense Image Matching Southampton 19th & 29th Oct 2015**

Area

**Oblique Cameras & Dense Image Matching Southampton 19th & 29th Oct 2015** 

### Imagery

Project name: 081015	User defined ID: GUID 🔻
☑ Use aerial images	Dissolve holes in footprints
V Split building footprints	Block file:
Terrain Data Aerial Images LiDAR Data External Data RoofSplitter R	loof Options   Building Adjustment   Info
Terrain data (TIN, *xyz, *.las, *.laz, *.op3d, *.shp, *.asc):	
G:\tridicon_dundalk\rcd\citymodeler\dtm\tin\TIN\tdenv.adf	Data basis terrain:
Save TIN to:	Min. terrain height [m]
Break lines (*.shp, *.op3d):	
Min. distance break line to point [m]: 0.2	
Max. length of break line segments [m]:	
Min. distance between points [m]: 0.0	
Create	TIN
Input and parameters: Reset   Advanced settings	Hun Close

### Workflow

- Created Dense Point Cloud from ADS Imagery using XPro
- Inserted this point cloud into City Modeller
- Insert a ground DTM (LiDAR 2m raster grid)
- Inserted polygon footprints from Prime2 dataset.
- Created LOD2 objects from point cloud and footprint datasets

### **Next Steps**

- Investigate the factors impacting the results we are getting
  - Flight planning
  - Weather
  - Knowledge of application
  - Building footprints
- Higher quality point clouds
  - Generate point cloud from oblique imagery
  - Find ways to fuse point clouds from other sources
- Continue to investigate the generation of footprints relative to the resolution of the imagery
- Automatic generation of solid objects as an output.
