

*International Workshop on Production Partnership Management
Ordnance Survey, Southampton. United Kingdom
7th to 9th November 2007
EuroSDR, FIG, EuroGeographics, AGI*

Breakout no 2 – RP group – raw output

What are your experiences of GI data supply as a contractor, sub-contractor or data custodian?

- Issues
 - Late notification of requirements (tendering process is too late)
 - Pre project/contract communication to encourage understanding of future requirements
 - Re tendering following a long contract (framework) and encouraging new contractors
 - Lack of supply chain visibility hindering the workflow

- Application of PPM to different kinds of networks
 - Government Agencies
 - Existing suppliers
 - New suppliers
 - Any of the above with 'off the shelf' products
 - Customers not willing to enter a partnership relationship
 - Suppliers with no production capability (PPM outsourced or traditional relationship?)

- Other PPM related issues
 - Roles need to be defined (eg customer, user, client, supplier, producer)
 - User needs definition
